ENERGY POLICY

dstelecom recognizes the importance of efficient energy management in promoting environmental sustainability, reducing operating costs, and strengthening its commitment to corporate responsibility.

The energy policy is aligned with the principles of ISO 50001:2018 - Energy Management System, reflects our mission, vision, and values, and is based on nine guiding principles.

- Ensure a team responsible for implementing and monitoring energy management activities, ensuring compliance with proposed targets and improving energy performance;
- Provide training to its employees in the areas of energy efficiency and energy performance;
- Promote a culture of energy efficiency in all activities, prioritizing actions that reduce consumption and promote the use of clean and renewable energy sources.
- Periodically set energy objectives and targets to improve the company's energy performance, its processes, and its energy management system;
- Ensure the monitoring of all proposed indicators and metrics, identifying, where applicable, deviations in energy consumption;
- Ensure continuous improvement in energy performance and the effectiveness of the energy management system, reviewing it periodically and allocating all necessary technical, financial, and human resources;
- Ensure compliance with legal requirements and standards applicable to the business, energy efficiency, energy use, and consumption;
- Exercise responsible consumption of energy resources and ensure the acquisition of energy-efficient products and services and a design geared towards improving energy performance
- Promote a clear and efficient internal and external communication process, as well as promote consultation and participation of employees, with the aim of involving them and informing all stakeholders.

This policy is mandatory from November 1, 2024.
